Sights for Autoloaders

Tri-Set Adjustable Sight Rib

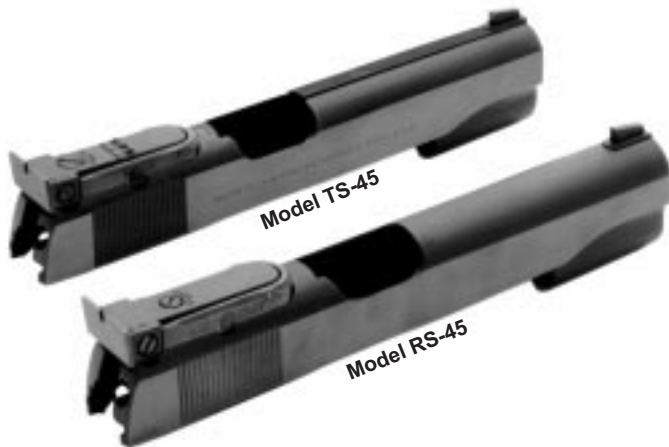

Model Auto-6

These sights bring the convenience, reliability and perfect sight picture of Aristocrat's PPC revolver ribs to the superbly accurate match autoloaders that are being produced by many gunmakers today. All Sight adjustments are made on the rear sight. Range selection is made simple and reliable by rotation of a 3 position cam.

Precision sight ribs machined from solid bar stock. All wear points are hardened for long service life. Designed specifically for PPC competition, the precise user pre-settable adjustments are for 7, 25 and 50 yards. The click elevation adjustments allow for range and ammunition variables. Undercut front and rear sights present the best sight picture ever.

Screw Adjustable Rear Sight

Model RS-45

Designed for conventional target shooting, the Model ASR-6 (shown below the Model TS-45) incorporates elevation screw adjustment with Aristocrat's quality sighting features.

Tri-Set Adjustable Rear Sight

Model TS-45

The Auto-6 model is designed for mounting on 6 inch 1911 models. Mounting on other types of pistols will be very limited. The TS-45 and RS 45 models are most often mounted on 1911 variations and they are factory available on the S&W PPC auto. For suitability on other pistols please consult with your gunsmith.
